

KAREL

Established in 1986, Karel is currently Turkey's biggest Telecommunication Equipment company without a foreign partner. Within the scope of its core business activities in the telecommunications sector; Karel is developing and manufacturing superstructure & infrastructure telephone systems including public switches, PBX systems and hundreds of peripherals. Karel also organizes global marketing, sales and after sales services operations.

While investing to the opportunities that lay beyond the convergence curve which is in line with the recent technological developments, the company also focuses on solutions that will create permanent value for its customers. With the evolution of PBX systems towards the unified communication solutions, the concept of communication now means much more than being an element of the infrastructure; thus we spend research and development efforts aimed at integrating communication with business intelligence and workflow.

Furthermore, Karel implements worldwide turnkey communication infrastructure projects for Public and Private sector enterprises. Karel also manufactures Defence Industries solutions.

Karel leads Turkish PBX market by far. Currently, more than 550,000 enterprises use Karel PBXs that handle almost 50% of business communication traffic in Turkey.

In 2009, Karel was certified as one of the World's top 15 manufacturers in its category. Over 9 million people in more than 20 countries use Karel products for corporate communications. Based on Gartner data, the company also leads Middle East and Africa markets
